

TAWS Obstacle Database Alert

NOTE: You must make this information available to appropriate crew members or customers immediately!

Date: June 2, 2022

Subject: TAWS Obstacle Database
Incorrect Effective Date
Release Number 2202

To: Universal Avionics Terrain Awareness Warning System (TAWS) Users
Database P12130

The Universal Avionics (UA) TAWS Obstacle database has an incorrect effective date. The effective date displayed on the TAWS Obstacle database for RN2202 is 19-May-02 instead of the correct effective date of 19-May-22. TAWS Obstacle data is intended to provide supplemental cues for increased terrain awareness to aid the pilot in cross-checking position with visually observed obstacle data and information provided by the TAWS.

A corrected TAWS Obstacle database will be released as RN2203 no later than Wednesday, 8 June 2022 with the correct effective date of 19-May-22. The database RN2203 will contain the same data as RN2202 as the data itself has no errors. In addition to the corrected effective date, the database has a unique CRC (187AC53F).

The corrected RN2203 database will be shipped no later than Friday, 10 June 2022.

Future TAWS Obstacle database releases in August and November will be identified as RN2204 (effective 11-Aug-2022) and RN2205 (effective 3-Nov-2022).
